customerAccountStatus	string	yes	ACTIVE, INACTIVE	
remark	string	no	3-100 characters	If the account is rejected then use a remark for rejection reasons.
customerCode	string	Auto create	IT85310298	User's unique customerId
isDeleted	bool = false	yes		
createdAt	dateTime	yes		
updatedAt	dateTime	yes		

After signing up for 6 digits OTP should ask.

API: Login

Endpoint: /api/auth/login

Method: POST

Field Name	Type	Required	Validation/Constraints	Description
emailAddress / phoneNumber	string	yes	Email, username, or phone number format	Email address for communication.
OTP	string	yes	6 digits	Logged in user's OTP

Notes

- **Password Security:** Passwords must be hashed using a secure algorithm (e.g., bcrypt).
- **Token Generation:** Use JWT for authentication, ensuring a secure expiration time.
- **Error Handling:** Provide clear and descriptive error messages for both developers and users.
- **Input Validation:** Ensure server-side validation for all fields.
- **Rate Limiting:** Implement rate limiting to avoid brute force attacks on the login API.

API: Address

Endpoint: /api/customer/address

Method: POST

Field Name	Type	Required	Validation/Constraints	Description
addressId	uuid	yes	Must be a valid UUID, unique across all users	Unique identifier for the user's wallet
prHNo	string	yes	3-50 characters	User's house number.
prStreetName	string	yes	3-50 characters	User's street name.
prCityName	string	yes	3-50 characters	User's city name.
prDistrictName	string	yes	3-50 characters, drop down	User's district name.
prStateName	string	yes	3-50 characters, drop down	User's state name.
prPinCode	int	yes	6 characters	User's pin code.
prCountryName	string	yes	3-50 characters, drop down	User's country name.
prmtHNo	string	no	3-50 characters (optional)	User's house number.
prmtStreetName	string	no	3-50 characters (optional)	User's street name.
prmtCityName	string	no	3-50 characters (optional)	User's city name.
prmtDistrictName	string	no	3-50 characters (optional), drop down	User's district name.
prmtStateName	string	no	3-50 characters (optional), drop down	User's state name.
prmtPinCode	int	no	6 digits (optional)	User's pin code.
prmtCountryName	string	no	3-50 characters (optional), drop down	User's country name.
isDeleted	bool = false	yes		
createdAt	dateTime	yes		
updatedAt	dateTime	yes		

API: KYC Verification

Endpoint: /api/customer/kyc

Method: POST

Note: For verification using Surepass (Aadhaar, PAN card) and signature.

Field Name	Type	Required	Validation/Constraints	Description

aadhaarCard	string	yes	3-50 characters. Surepass response.	User's aadhaar card.
panCard	string	yes	3-50 characters, Surepass response.	User's aadhaar card.
signature	string	yes	response.	User's signature.
isDeleted	bool = false	yes		
createdAt	dateTime	yes		
updatedAt	dateTime	yes		

API: Wallet Balance

Endpoint: /api/customer/myWallet

Method: POST and GET

Note: Payment gateway transaction. History fields will be added on while making an api.

Field Name	Type	Required	Validation/Constraints	Description
myWalletId	uuid	yes	Must be a valid UUID, unique across all users	Unique identifier for the user's wallet
walletBalance	double	Yes (default 0.0)	Must be a non-negative value	Represents the balance in the user's wallet, can be a decimal value (e.g., 1500.75)
investedAmount	double	Yes (default 0.0)	Must be a non-negative value	Represents the balance in the user's wallet, can be a decimal value (e.g., 1500.75)
gainedAmount	double	Yes (default 0.0)	Must be a non-negative value	Represents the balance in the user's wallet, can be a decimal value (e.g., 1500.75)
isDeleted	bool = false	yes		
createdAt	dateTime	yes		

updatedAt	dateTime	yes		
-----------	----------	-----	--	--

API: NeftTransaction (NEFT, IMPS, RTGS)

Endpoint: /api/customer/neftTransaction

Method: Multipart(POST) and GET

Note: Also need to get an api with fields. Get api for neft transaction history.

Field Name	Type	Required	Validation/Constraints	Description
neftId	uuid	yes	Must be a valid UUID, unique across all users	Unique identifier for the user's wallet.
amount	double	Yes (default 0.0)	Must be a non-negative value	Represents the balance in the user's wallet, can be a decimal value (e.g., 1500.75).
transactionId	string	yes	5-50 characters	User's neft transaction id.
bankName	string	Yes	5-50 characters	User's bank name.
bankBranch	string	Yes	5-50 characters	User's bank branch name.
transferDate	date	yes		Transfer date
neftImage	media / string	yes		Neft photo.
status	string	no (Pending)	3-50 character (Accepted, Rejected, Pending)	These fields will be approved by superadmin.
transactionRemark	string	no (null)	Null or empty string	If superadmin reject they should add a rejected reason.
isDeleted	bool = false	yes		
createdAt	dateTime	yes		
updatedAt	dateTime	yes		

API: Withdrawal

Endpoint: /api/customer/withdrawWalletAmount

Method: POST and GET

Note: Also need to get an api with fields. Get api for withdrawal transaction history

Field Name	Type	Required	Validation/Constraints	Description
withdrawalId	uuid	yes	Must be a valid UUID, unique across all users	Unique identifier for the user's wallet.
amount	double	Yes (default 0.0)	Must be a non-negative value	Represents the balance in the user's wallet, can be a decimal value (e.g., 1500.75).
status	string	no (Pending)	3-50 character (Accepted, Rejected, Pending)	These fields will be approved by superadmin.
transactionRemark	string	no (null)	Null or empty string	If superadmin reject they should add a rejected reason.
dateOfWithdrawal	date	yes		Transfer date
approvedOn	date	no		Superadmin's approved date.

API: Enterprise

Endpoint: /api/admin/enterprise

Method: POST and GET

Note: POST api enterprise should only be by superadmin.

Field Name	Type	Required	Validation/Constraints	Description
enterpriseId	uuid	yes	Must be a valid UUID, unique across all users	Unique identifier for the user's wallet.
enterpriseName	string	Yes	3-50 character	Enterprise name.
enterpriseLogo	media/string	yes		Enterprise profile photo.
companyOverView	string	yes	3-2000 character	About the company.
financialOverView	string	yes	3-2000 character	About company financials.
enterpriseStatus	string	yes, default = ENABLE	15 character	Enterprise status.
shortdescription	string	no	3-100	Enterprise short description..
emailAddress	string	no	Valid email format, unique	Email address for communication.

phoneNumber	string	no	10-15 digits, unique	User's contact number.
businessSector	string	no	3-100 character	Enterprise business sector.
location	string	no	3-100 character	Enterprise location.
address1	string	no	3-100 character	Enterprise address1.
address2	string	no	3-100 character	Enterprise address 2.
country	string (drop down)	no	3-100 character	Enterprise country.
state	string (drop down)	no	3-100 character	Enterprise state.
city	string (drop down)	no	3-100 character	Enterprise city.
otherCity	string	no	3-100 character	If there is no city on drop down then allow this option.
postalCode	int	no	6 digits	Enterprise postal code.
totalDeals	int	no, default = 0	up to 20 digits	Enterprise no of deals.
ongoingDeals	int	no, default = 0	up to 20 digits	Enterprise no of ongoing deals.
completedDeals	int	no, default = 0	up to 20 digits	Enterprise no of completed deals.
totalDealValue	decimal	no, default = 0.0	up to 30 digits	Enterprise total deal amount.
isDeleted	bool = false	yes		
createdAt	dateTime	yes		
updatedAt	dateTime	yes		

API: Vendor

Endpoint: /api/admin/vendor

Method: POST and GET

Note: POST api vendor should only be by superadmin.

Field Name	Type	Required	Validation/Constraints	Description
------------	------	----------	------------------------	-------------

vendorId	uuid	yes	Must be a valid UUID, unique across all users	Unique identifier for the user's wallet.
vendorCode	string	yes	8-10 character, unique	Unique vendor code VEN8789.
vendorName	string	Yes	3-50 character	Enterprise name.
enterpriseLogo	media/string	no		Enterprise profile photo.
companyOverView	string	no	3-2000 character	About the company.
financialOverView	string	no	3-2000 character	About company financials.
enterpriseStatus	string	yes, default = ENABLE	15 character	Enterprise status.
shortdescription	string	no	3-100	Enterprise short description..
emailAddress	string	yes	Valid email format, unique	Email address for communication.
phoneNumber	string	yes	10-15 digits, unique	User's contact number.
businessSector	string	no	3-100 character	Enterprise business sector.
location	string	no	3-100 character	Enterprise location.
address1	string	no	3-100 character	Enterprise address1.
address2	string	no	3-100 character	Enterprise address 2.
country	string (drop down)	no	3-100 character	Enterprise country.
state	string (drop down)	no	3-100 character	Enterprise state.
city	string (drop down)	no	3-100 character	Enterprise city.
otherCity	string	no	3-100 character	If there is no city on drop down then allow this option.
postalCode	int	no	6 digits	Enterprise postal code.
totalDeals	int	no, default = 0	up to 20 digits	Enterprise no of deals.
ongoingDeals	int	no, default = 0	up to 20 digits	Enterprise no of ongoing deals.
completedDeals	int	no, default = 0	up to 20 digits	Enterprise no of completed deals.
totalDealValue	decimal	no, default = 0.0	up to 30 digits	Enterprise total deal amount.

isDeleted	bool = false	yes		
createdAt	dateTime	yes		
updatedAt	dateTime	yes		

API: Deals

Endpoint: /api/admin/shortTermDeal?pageNumber=1&pageSize=10

Method: POST and GET

Note: POST api deal should only be by superadmin.

Field Name	Type	Required	Validation/Constraints	Description
dealId	uuid	yes	Must be a valid UUID, unique across all users	Unique identifier for the user's wallet.
dealType	string	yes	All capital letters "SHORTTERMDEAL" & "STRATEGICDEAL"	Deal type.
enterpriseDetail	enterprise object	yes	Drop down only take id	For showing all details to customer
vendorIdDetail	vendor object	yes	Drop down only take id	For showing all details to customer
xScore	x-score object	yes	Drop down only take id	For showing all details to customer
dealAmount	double	Yes	Must be a non-negative value	Represents the balance in the user's wallet, can be a decimal value (e.g., 1500.75)
completedAmount	double	Yes	Must be a non-negative value	Represents the balance in the user's wallet, can be a decimal value (e.g., 1500.75)
availableAmount	double	Yes	Must be a non-negative value	Represents the balance in the user's wallet, can be a decimal value (e.g., 1500.75)
minimumAmount	double	Yes	Must be a non-negative value	Represents the balance in the user's wallet, can be a decimal value (e.g., 1500.75)
maximumAmount	double	Yes	Must be a non-negative value	Represents the balance in the user's wallet, can be a decimal value (e.g., 1500.75)

grossYeild	double	yes	Must be a non-negative value	16.55 %
netYeild	double	yes	Must be a non-negative value	14.55 %
tenureInDays	int	yes	Must be a non-negative value	60 days
dealReport	Media / string	yes	Upload pdf, Note: Accepts only (PDF DOC DOCX TXT) and less than 10MB	PDF download.
enterpriseInvoice	Media / string	no	Upload pdf, Note: Accepts only (PDF DOC DOCX TXT) and less than 10MB	PDF download.
enterpriseInvoiceShowTo Customer ?	string	no	Drop down "YES" or "NO"	
createdBy	string	yes	3-50 character	Uploaded by super admin or admin.
isDeleted	bool	yes		
createdAt	date	yes		
updatedAt	date	yes		
isDeleted	bool = false	yes		
createdAt	dateTime	yes		
updatedAt	dateTime	yes
